

Action Network ID attached

Private data embedded in links VERY IMPORTANT - don't use links that you've copied out of other emails. Links from Action Network email contain tracking links and people's personal Action Network ID's etc.

The error you get is a pop-up box list this...

The cause :

e.g

https://www.surveymonkey.co.uk/r/CZZX5DN?link_id=2&can_id=071ccc07c7xxxxxxxxxxxxd003

If you copied the link from an Action Network email that you had previously received - the link will have your personal ID attached (the &can_id= part). You don't need any of the information after the question mark.

The solution :

In this case you would just use <https://www.surveymonkey.co.uk/r/CZZX5DN>

This goes for other links with use info in - eg. some google links or links to Facebook or a fundraiser. Just cut out the question mark and everything after and make sure the links still works and just use that instead.
